Box I Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)					
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:					
1. Claims Nos:					
because they relate to subject matter not required to be searched by this Authority, namely:					
2. Claims Nos: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:					
3. Claims Nos:					
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule					
6.4(a)					
Box II Observations where unity of invention is lacking (Continuation of item 3 of first sheet)					
This International Searching Authority found multiple inventions in this international application, as follows:					
See extra sheet.					
·					
As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims					
As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.					
As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:					
4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:					
Remark on Protest The additional search fees were accompanied by the applicant's protest.					
No protest accompanied the payment of additional search fees.					

International application No. PCT/SG03/00232

Supplemental Box

(To be used when the space in any of Boxes I to VIII is not sufficient)

Continuation of Box No: II

The international application does not comply with the requirements of unity of invention because it does not relate to a single invention or inventive concept only. In coming to this conclusion, the International Searching Authority has found that there are three invention:

- Claims 1-4, 19-32, 47, 49-58. The detection of pitch values of marked musical notes is considered to be a first "special technical feature."
- Claims 5-9, 33-37. The extraction of note markers from the gradient function of a sound signal's envelope is a second "special technical feature."
- Claims 10-18, 38-46, 48. The detection of pitch values by clustering is a third "special technical feature."

Since these groups of claims do not share any of the special technical features identified above, a "technical relationship" between the inventions, as defined in PCT rule 13.2, does not exist. Hence the claims lack unity.
